## To All OREIS 6.0 Users

The Operation Respond Institute has released a new version of the Operation Respond Emergency Information System software, OREIS™ 7.0, for North America's emergency responders. This powerful, secure information tool is packed with new features and thoroughly tested capabilities, and comes equipped with security encryption technology that is proving to be far less troublesome for our users. OREIS™ is now being deployed throughout the United States and Canada.

All current OREIS™ subscribers should have received a copy of this exciting new software package. We urge that you install this version 7.0 immediately, as version 6.0 will be phased out on July 31st. Therefore, it is critical that all current OREIS™ subscribers install this new version as soon as possible to avoid any disruption in service. ORI will not be able to support the older versions, which require expensive and cumbersome encryption software in order to function.

For current 6.0 users who would like to continue your OREIS membership, we encourage your agency to order the new enhanced version, OREIS™ 7.0. Please visit [www.oreis.org/ori\\_info/renew.cfm](http://www.oreis.org/ori_info/renew.cfm) to place an order for OREIS™ 7.0.

We also now have a very efficient version of OREIS™ – OREIS Mobile™ -- available for installation on a BlackBerry®, or a wireless device utilizing the Windows Mobile® Operating System. While it does not yet contain rail passenger schematics due to screen size limitations, it does have the full-featured rail car search connection with major North American railroads for identifying hazmat cargoes. (As with OREIS™ 7.0, this railcar search feature is available only to registered emergency responders.) This unique search feature and the no-nonsense layout and design of OREIS Mobile™ are garnering praise from on-scene emergency personnel and managers at all levels. For further information on how to obtain OREIS™ Mobile for your wireless device, please contact us at [www.oreis.org](http://www.oreis.org).

Thank you for your long term commitment to Operation Respond. We look forward to continuing to provide North America's emergency responders with the best possible on-scene tools for dealing with transportation and logistics emergencies involving hazardous materials.
